

**IN THE CLAIMS:**

**Please enter, amend or cancel the following claims:**

1. (Canceled)

2. (Currently Amended) TheA process according to claim 51, whereby the directory enquiry facility also issues an action command that causes the terminal to determine the telephone number from the numeric string and to save the telephone number in the memory in the terminal provided for direct dialing of telephone numbers.

C 3. (Currently Amended) TheA process according to claim 51, whereby the telephone number is displayed on a display in the terminal.

4. (Currently Amended) TheA process according to claim 71, where the telecommunication network is an ISDN network and the second channel is a D channel of the ISDN network.

5. (Currently Amended) A process of transmitting a telephone number of a desired subscriber from a directory enquiry facility to a terminal connected to the directory

enquiry facility over a telecommunication network with a first channel for voice transmission and a second channel for data transmission, said process comprising:

transmitting an enquiry with the data describing the desired subscriber from the terminal to the directory enquiry facility on the first channel;

transmitting the telephone number in the form of a numeric string from the directory enquiry facility to the terminal on the second channel;

receiving the numeric string at the terminal;

determining the telephone number from the numeric string; and

storing the telephone number in a memory in the terminal provided for direct dialing of telephone numbers.

*C Cont*  
~~A process according to claim 1~~ where the telecommunication network is a GSM mobile telephone network and the second channel is an organization channel of the mobile telephone network.

6. (Currently Amended) ~~The~~A process according to claim ~~51~~<sub>1</sub>, whereby the directory enquiry facility sends the data describing the desired subscriber as an alpha-numeric string to the terminal on the second channel, and the terminal receives the alpha-numeric string, derives the data from the alpha-numeric string, and displays it on a display.

7. (Currently Amended) A process of transmitting a telephone number of a desired subscriber from a directory enquiry facility to a terminal connected to the directory enquiry facility over a telecommunication network with a first channel for voice transmission and a second channel for data transmission, said process comprising:

transmitting an enquiry with the data describing the desired subscriber from the terminal to the directory enquiry facility on the first channel;

transmitting the telephone number in the form of a numeric string from the directory enquiry facility to the terminal on the second channel;

receiving the numeric string at the terminal;

determining the telephone number from the numeric string; and

storing the telephone number in a memory in the terminal provided for direct dialing of telephone numbers.

A process according to claim 1 wherein said terminal includes a keyboard, and the terminal sends a message to the directory enquiry facility on the second channel when a key is pressed on the keyboard of the terminal, indicating to the directory enquiry facility a request for further information.

8. (Currently Amended) A directory enquiry facility comprising:  
receiver means for connecting to a terminal over a telecommunication network on a line

with a first channel for voice transmission and a second channel for data transmission, and receiving on the first channel an enquiry with data describing a desired subscriber;

converter means for converting a telephone number into a numeric string; and

transmitter means for transmitting the numeric string to the terminal on the second channel, where the telecommunication network is a GSM mobile telephone network and the second channel is an organization channel of the mobile telephone network.

Cont

9. (Previously Presented) A directory enquiry facility according to claim 8, wherein the facility further comprises means for issuing an action command which causes the terminal to determine the telephone number from the numeric string and store that telephone number in a memory of the terminal provided for direct dialing of the telephone number.

10. (Currently Amended) A terminal for a telecommunication network, the terminal comprising:

means for connecting ~~means for connecting~~ over the telecommunication network to a directory enquiry facility on a line with a first channel for voice transmission and a second channel for data transmission;

means for transmitting on the first channel for voice transmission an enquiry with data describing a desired subscriber;

means for receiving on the second channel a telephone number of a subscriber sent from the directory enquiry facility in the form of a numeric string;

means for determining the telephone number from the numeric string; and  
memory means for storing the telephone number and can for yielding the telephone  
number for direct dialing of the subscriber,

wherein said terminal includes a keyboard, and the terminal sends a message to the  
directory enquiry facility on the second channel when a key is pressed on the keyboard of the  
terminal, indicating to the directory enquiry facility a request for further information.

C  
Cont  
11. (Currently Amended) A directory enquiry telephone number transmission  
system, comprising:

means for transmitting an enquiry with data describing a desired subscriber from a  
terminal to a directory enquiry facility on a first channel for voice transmission;

means for transmitting a telephone number in the form of a numeric string from the  
directory enquiry facility to the terminal on a second channel for data transmission;

means for receiving the numeric string at the terminal;

means for issuing an action command by the directory enquiry facility to cause the  
terminal to determine the telephone number from the numeric string and to save the telephone  
number in the memory in the terminal provided for direct dialing of telephone numbers,

wherein said terminal includes a keyboard, and the terminal sends a message to the directory enquiry facility on the second channel when a key is pressed on the keyboard of the terminal, indicating to the directory enquiry facility a request for further information.

12. (Currently Amended) A directory enquiry facility comprising:

a receiving module configured to receive from a terminal connected to a telecommunication network with a line with a first channel for voice transmission and a second channel for data transmission an enquiry with data describing a desired subscriber, the receiving module receiving the enquiry on the first channel

a converter configured to convert a telephone number into a numeric string; and

C  
Cont  
a transmitter configured to transmit the numeric string to the terminal on the second channel,

where the telecommunication network is a GSM mobile telephone network and the second channel is an organization channel of the mobile telephone network.

13. (Previously Presented) The directory enquiry facility of claim 12, wherein the facility is configured to issue an action command to cause the terminal to determine the telephone number from the numeric string and to store the telephone number in a memory of the terminal provided for direct dialing of the telephone number.

14. (Currently Amended) A terminal in a telecommunication network comprising:

a connecting module configured to connect over the telecommunication network to a directory enquiry facility on a line with a first channel for voice transmission and a second channel for data transmission, and to transmit on the first channel an enquiry with data describing a desired subscriber;

C  
Cont a receiving module configured to receive on the second channel a telephone number of a subscriber sent from the directory enquiry facility in the form of a numeric string and to determine the telephone number from the numeric string; and

a memory configured to store the telephone number and to yield the telephone number for direct dialing of the subscriber,

where the telecommunication network is a GSM mobile telephone network and the second channel is an organization channel of the mobile telephone network.
